EU Compliance Weekly Checklist

GPSR (EU) 2023/988 - marketplace listing self-audit | Last verified: 2026-11-12

CrossAIO free download. No email required. Operational guidance, not legal advice. Verify against current marketplace documentation and the official EU text before acting.

HOW TO USE

Print one copy per SKU family, or filter the CSV field map by marketplace and work down this list. Mark each box, record the date and the name of the person who checked it. If any item fails, fix the SOURCE row once and then re-export, rather than editing each marketplace listing by hand.

A. BEFORE EVERY BULK UPLOAD

- [ ] Manufacturer name and postal address are present in the source row and match the supplier contract.
- [ ] EU Responsible Person (Art. 16) name, postal address and responsive email are present for non-EU manufacturers.
- [ ] Product identifier (model / batch / serial) matches the physical item and its packaging.
- [ ] Safety warnings exist in every language listed for that marketplace; English only is not enough on DE/FR/IT/ES.
- [ ] EU RP details appear as readable text on the offer, not only inside a product image.
- [ ] One file per marketplace; for Amazon Manage Your Compliance split further by category x site x language.
- [ ] Encoding is UTF-8 with BOM, TAB separated, hidden columns expanded, keyed on manufacturer reference (not ASIN).

B. WEEKLY

- [ ] Pull the Manage Your Compliance / Product Compliance Requests queue and clear the highest-revenue ASINs first.
- [ ] Export the field-level error text for every rejected ASIN; keep it with the dated flat file.
- [ ] Reconcile manufacturer, EU RP and product identifier in ONE source table before the next upload.
- [ ] Spot-check 10 live offers per marketplace for the three most-missed fields: EU RP, local-language warnings, traceability.
- [ ] Check whether any marketplace added a country or product type; required fields are not identical across them.
- [ ] Verify that warning text is still visible on video / live-shopping listings where the platform requires it.
- [ ] Check the invoice and packaging copy of EU RP details for marketplaces that require them there too (e.g. bol).
- [ ] Confirm the DoC file is still the current signed version and that test reports have not expired.
- [ ] Record the submitted version and timestamp per ASIN; a rejected field usually fails again if you cannot show what changed.
- [ ] Save the weekly snapshot with the checker's name so an appeal can show a dated audit trail.

C. BEFORE PEAK SEASON / QUARTERLY

- [ ] Re-run the 13-marketplace field map against current official policy pages and refresh the last-verified date.
- [ ] Re-confirm the EU RP appointment letter still covers every SKU and every

marketplace.

- [ ] Translate new warnings and manuals before new country launches, not after.
- [ ] Verify LUCID / VerpackG, WEEE and battery take-back identifiers where those regimes apply.
- [ ] Confirm the legacy-stock exemption evidence (date of placing on the market) is archived and retrievable.
- [ ] Review high-risk categories (children's products, electrical, battery, cosmetics, food contact) for extra documents.
- [ ] Test one SKU end-to-end in two new marketplaces before scaling the catalogue.
- [ ] Review the ESPR / DPP readiness sheet and note which delegated acts actually apply to your categories.

D. EVIDENCE RETENTION

- [ ] Keep the DoC and technical documentation for 10 years (GPSR Art. 9).
- [ ] Keep a dated copy of every submitted flat file, the exact error text and the ASIN list.
- [ ] Keep the EU RP designation, test reports and the versioned translation sheet in the same folder.
- [ ] Keep the marketplace takedown notice and the exact listing version that was flagged.
- [ ] Never overwrite a submitted file: write a new dated version so an appeal can show what changed.

E. 13-MARKETPLACE QUICK CHECK

Tool = language set in the offline TSV generator; Policy = marketplace rule. Where they differ, trust the marketplace.

- [ ] Amazon EU | languages (tool): en de fr it es nl sv pl | One language per site; 8 languages in the TSV default | EU - GPSR applies (deepest 2026 blocker)
- [ ] Amazon US | languages (tool): en | EN only on US site; EU rules apply only if goods enter the EU | US - GPSR NOT directly applicable
- [ ] eBay | languages (tool): en de fr it es | DE mandatory on ebay.de; other sites follow their own language | EU - GPSR applies to business sellers
- [ ] Fruugo | languages (tool): en de fr nl | Per Fruugo translation matrix; 4 languages in the TSV default | EU - GPSR applies to EU sales
- [ ] Walmart | languages (tool): en | EN only on US site; EU rules apply only if goods enter the EU | US - GPSR NOT directly applicable
- [ ] Cdiscount | languages (tool): fr | FR mandatory (Loi Toubon) | EU - GPSR applies
- [ ] Otto | languages (tool): de | DE mandatory | EU - GPSR applies
- [ ] Allegro | languages (tool): pl cs sk | PL mandatory; CZ/SK per Allegro translation policy | EU - GPSR applies
- [ ] eMAG | languages (tool): ro | RO mandatory; HU optional on a separate site | EU - GPSR applies
- [ ] Kaufland | languages (tool): de | POLICY says DE/AT/CZ/SK (4 languages); the offline TSV default lists DE only - verify before upload | EU - GPSR applies
- [ ] bol.com | languages (tool): nl | NL mandatory; FR for BE buyers | EU - GPSR applies
- [ ] Zalando | languages (tool): de fr nl pl | Per country of sale; 4 languages in the TSV default | EU - GPSR applies
- [ ] TikTok Shop | languages (tool): en de fr it es | DE/FR/IT/ES per site; also applies to video and live shopping | EU - GPSR applies

F. WHEN A LISTING IS SUPPRESSED

- [ ] Hour 1 is about evidence, not rewriting copy: save the notice and the exact listing version.
- [ ] Pull the exact field-level error before opening a case; do not re-upload an unchanged flat file.

- [ ] For Error 5995 on Amazon, first check whether the account holds the Brand Registry role for the ASIN - it is usually a bulk-permission wall, not broken data.
- [ ] Attach the DoC, the EU RP authorisation letter and the test reports; incomplete evidence is commonly rejected.
- [ ] For small catalogues, submit through the Account Health / Manage Your Compliance dashboard one ASIN at a time.
- [ ] Run the same check across the rest of the catalogue so the failure does not repeat.
